

Use Case: Lumber and Timber

Increased Efficiency and Money Saved with Actsoft

A lumber and timber haul and removal company.

Challenges

A lumber and timber removal company used to have a big issue tracking the time their employees were on the clock. When a truck in use got to the mill to drop off lumber, management couldn't keep track of how long a driver was idle before the mill was used. Nuances in tracking and verifying accurate driver logs (which could result in fines for the company if there were egregious errors) were also a problem.

Solution

The company decided an in-vehicle GPS solution would be ideal for knowing more about their field operations. Actsoft provided them with a way to keep track of vehicles and also to know who was on the clock at any given time. Their business now has a platform to gain clear insight into the specifics of what's happening outside of the office.

Benefits

The lumber company has seen an increase in efficiency by at least 20% and saves money and time in the period they've used Actsoft. The solution gives them a more accurate timeline of time spent at the mill to be able to better track drivers' activities there in near real-time. Our system also helps them verify drivers' time on the road to administrators, even when they're away from the field and back in the office.
